# 3CaTS (3D Cadmium-Zinc-Telluride spectra-imager for X and gamma-ray applications) project

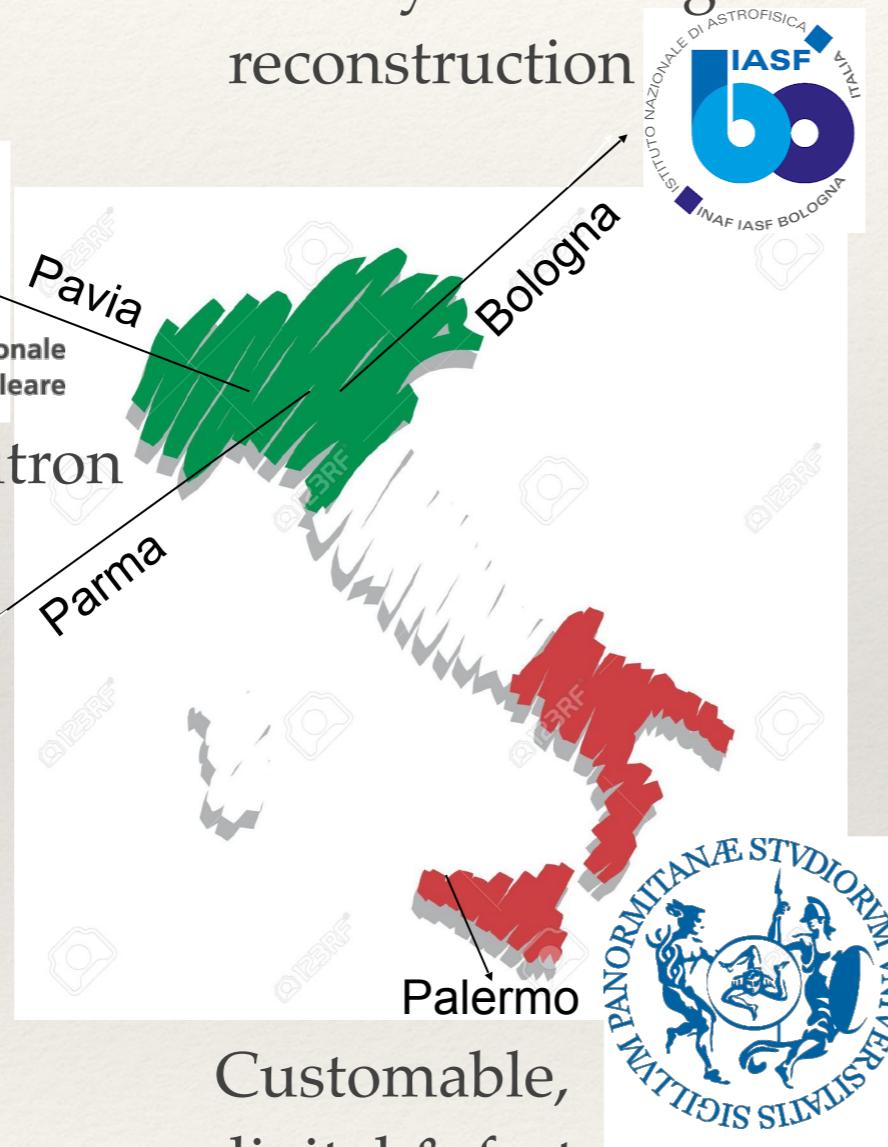

Astronomy and image reconstruction

BNCT and neutron facility

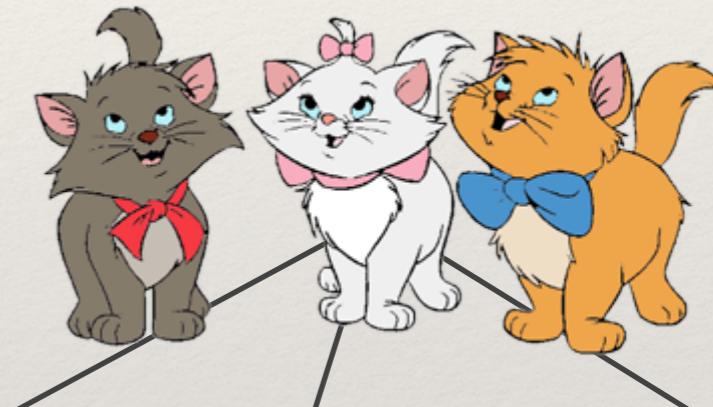

Detector procurement & customization

Customable,  
digital & fast  
electronics

Aims of the project:

SPECT-BNCT

fine spectroscopy  
for fundamental  
physics

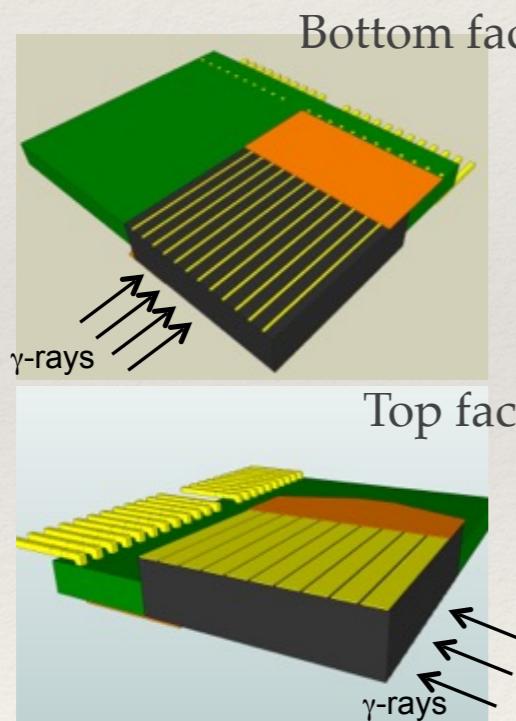

hard X and soft  
gamma rays  
astronomy

# 3CaTS (3D Cadmium-Zinc-Telluride spectra-imager for X and gamma-ray applications) project

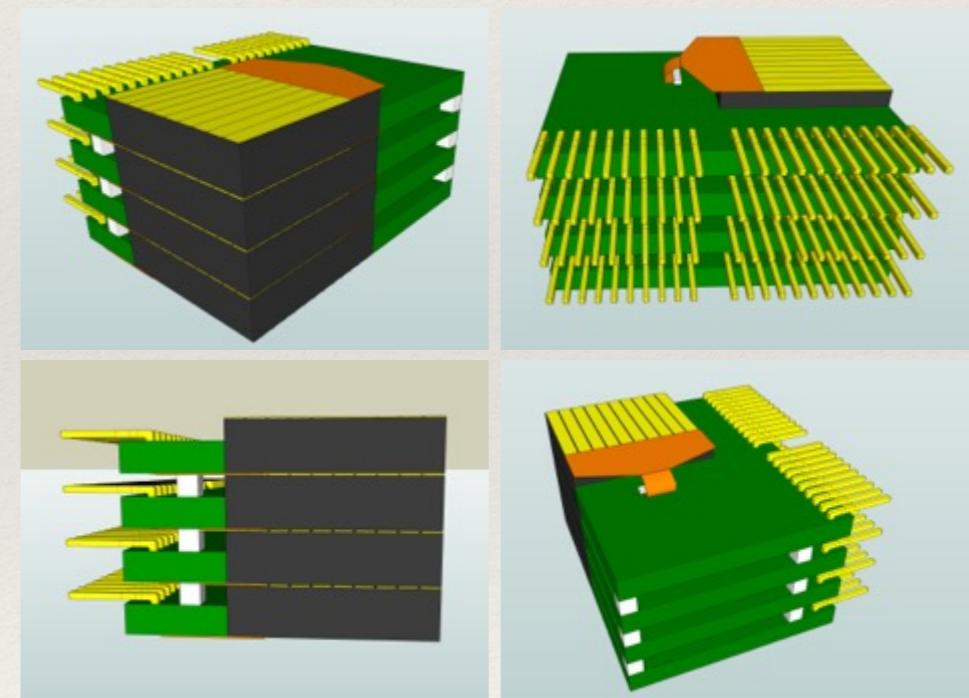

CZT single unit of detection:

20x20x5 mm<sup>3</sup>,  
planar transversal filed (PTF),  
orthogonal strip electrodes +  
DOI analysis for 3D sensitivity

4 CZT stack prototype,  
20x20x20 mm<sup>3</sup>,  
120 read-out channels

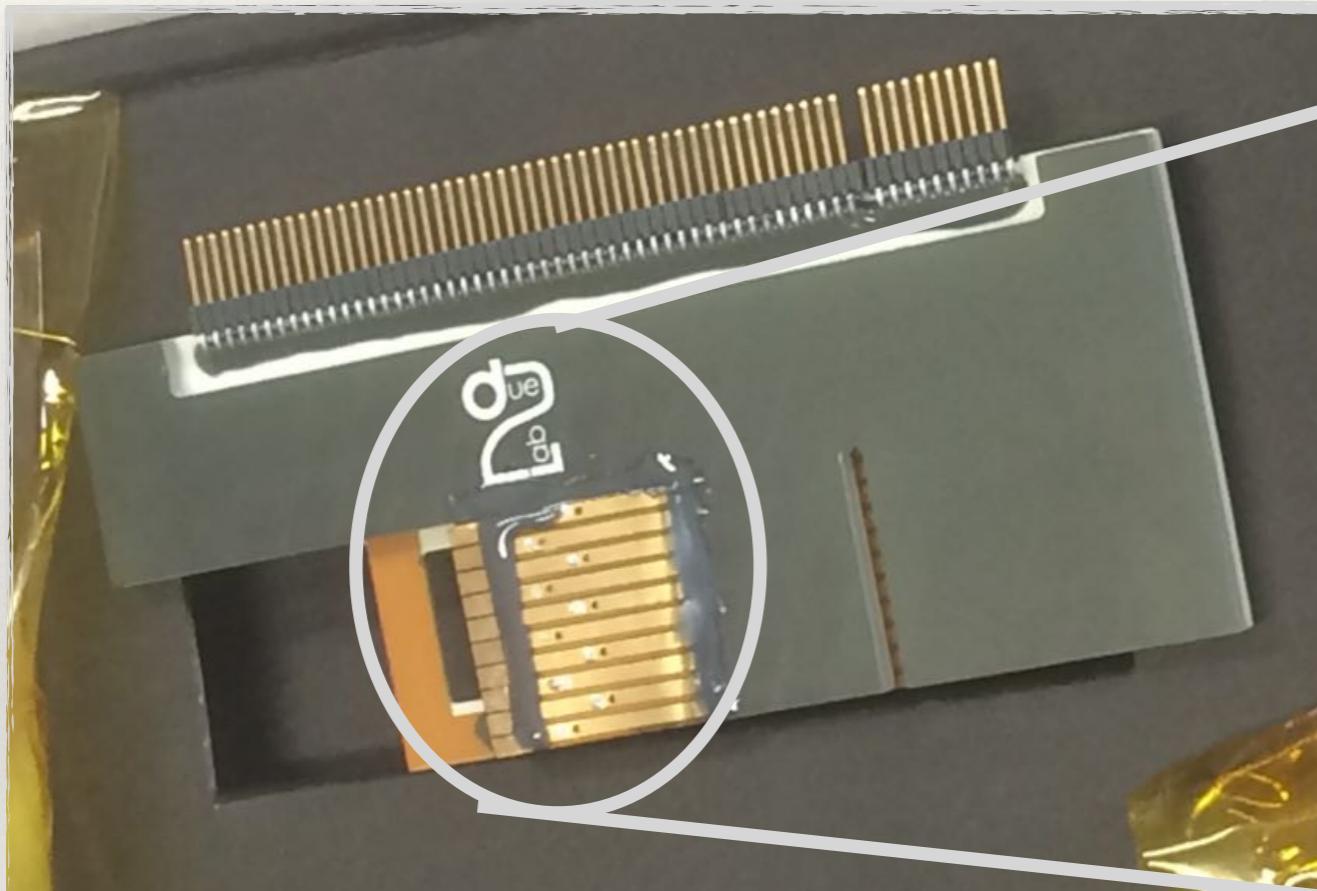

(\*) drift stripes not  
reported for clarity

# 3CaTS (3D Cadmium-Zinc-Telluride spectra-imager for X and gamma-ray applications) project

- ❖ Main goals of the project:
  - ❖ Highly segmented CZT spectrometer with **3D spatial resolution capabilities**
  - ❖ Energy range from **few tens of keV up to 700 keV**
  - ❖ **High efficiency, fine spectroscopy and imaging limiting the complexity of detector design and realisation**
- ❖ Expected performance:
  - ❖ Intrinsic geometrical **space resolution** of **1x5x2 mm<sup>3</sup> improvable** by reconstruction methods down to 0.2x0.3 mm<sup>2</sup> in the plane directly exposed to the photon flux ( $\Delta x \cdot \Delta y$ ) and 0.6 mm in depth ( $\Delta z$ )
  - ❖ **Detection efficiency at 478 keV: 13%** for photoelectrons, **52%** for Compton scattered events
  - ❖ **Energy resolution: <3%** at 500 keV without correction, **improvable** to **<1%** after corrections
  - ❖ Operating as scattering polarimeter above 100 keV (astrophysical applications)

# 3CaTS (3D Cadmium-Zinc-Telluride spectra-imager for X and gamma-ray applications) project

20 anode strips of pitch 1 mm  
Cathode: 10 segments, pitch 2 mm

Voxel size:  $1 \times 2 \times 5 \text{ mm}^3$

# Room temperature solid state detectors

## ADVANTAGES

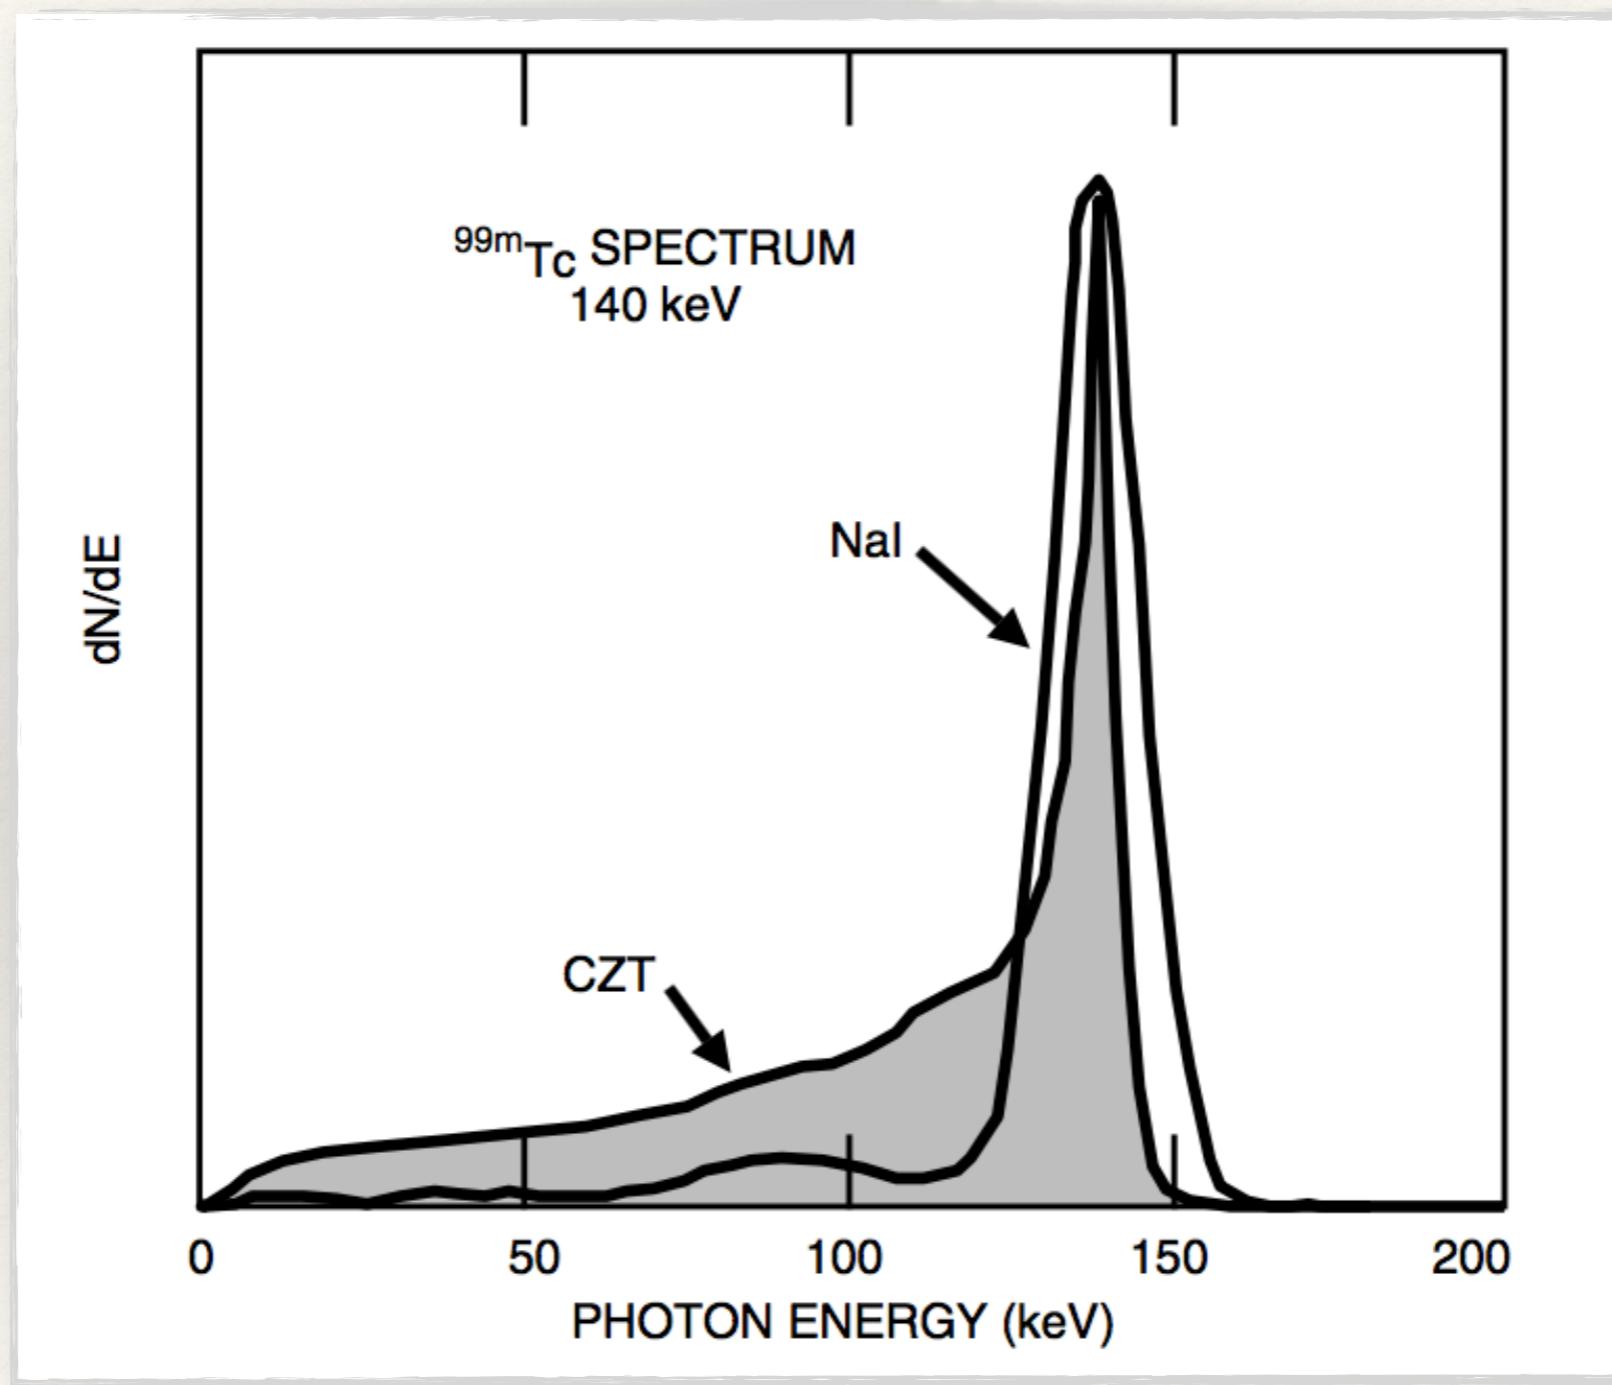

High Z = high detection efficiency even with small volumes  
 Wide band gap = leakage current < nA & room temperature operations

## DISADVANTAGES

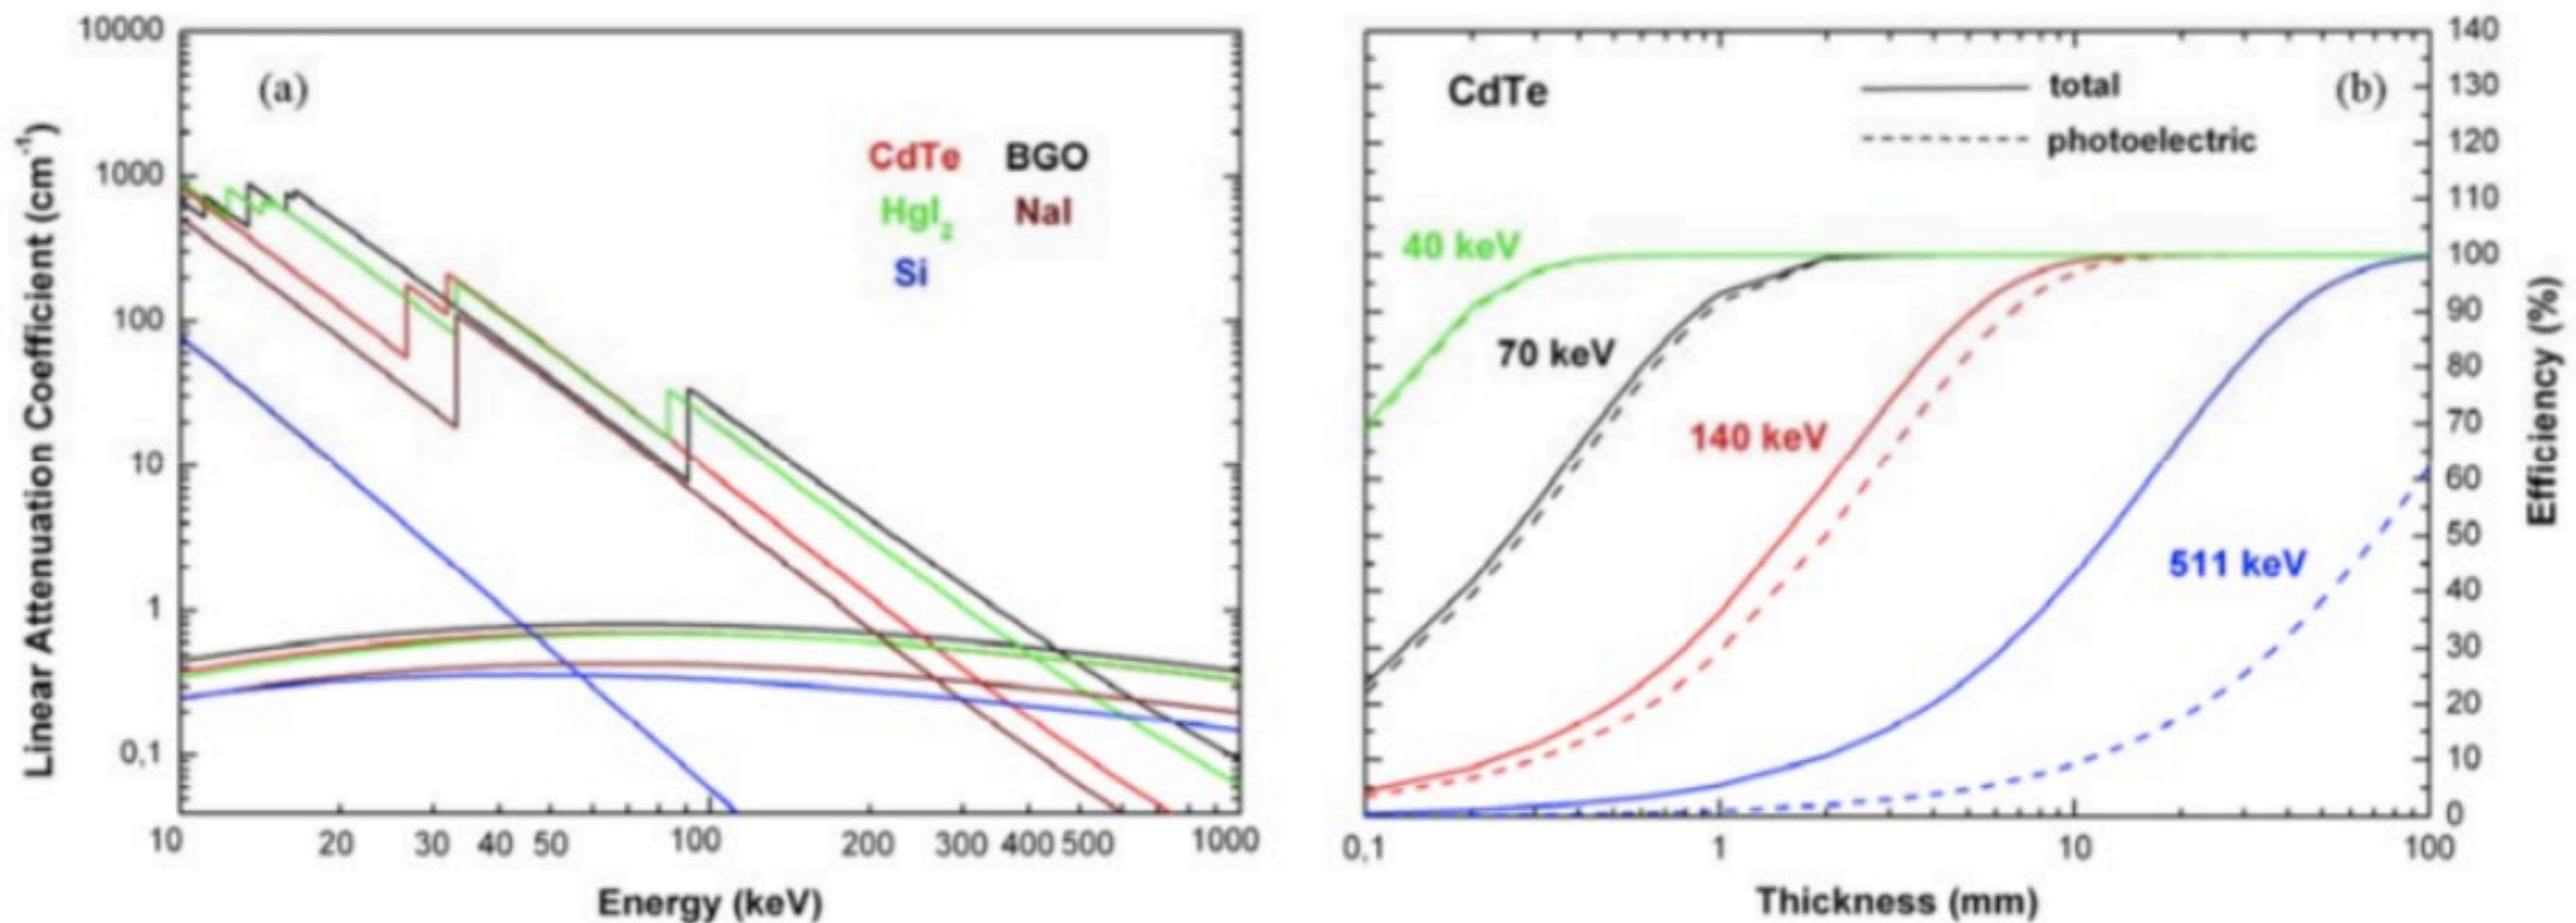

Charge carriers trapping = reduction of energy resolution & enhancement of detector performances  
 breakdown at high counting rate

# Room temperature solid state detectors

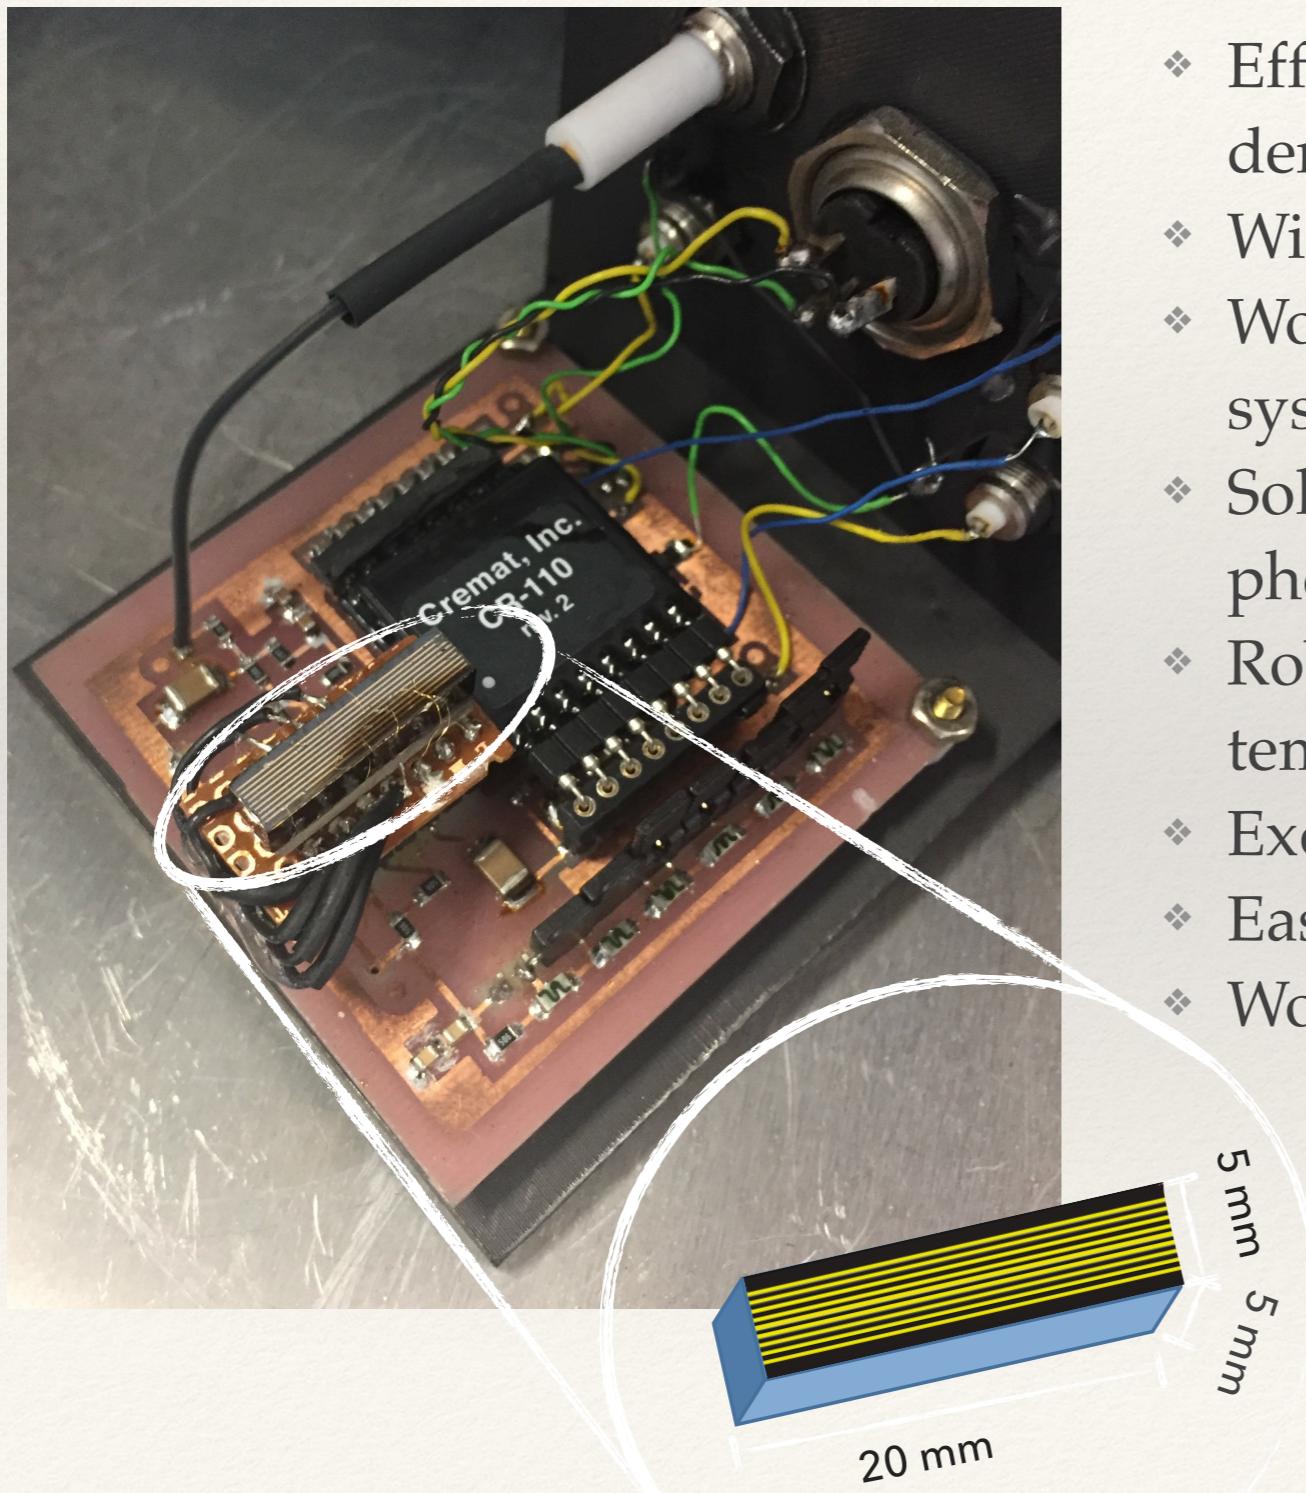

# Room temperature solid state detectors

Important contribution of Compton effect @ 478 keV  
3D spacial detection: Compton Camera?!

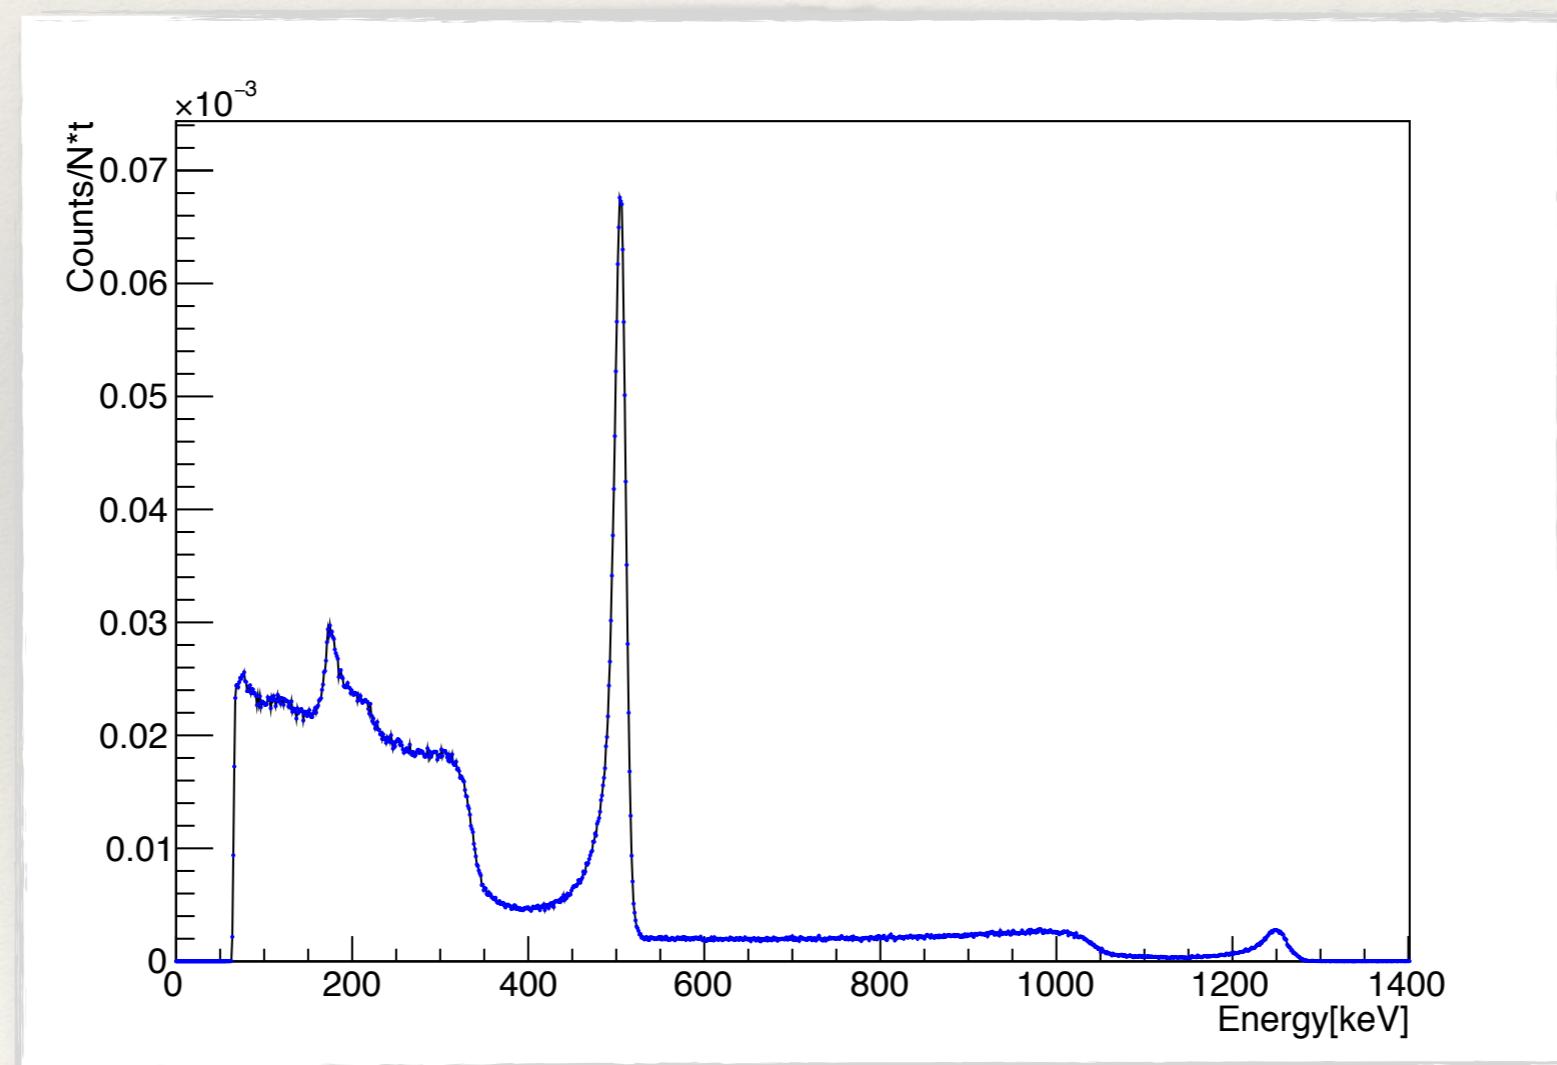

# Why CZT detector?

- ❖ Efficient yet compact due to their high density
- ❖ Wide photon energy range
- ❖ Works at room temperature (no cooling system)
- ❖ Solid state: do not require fragile photomultiplier tubes
- ❖ Robust and able to withstand rapid temperature changes
- ❖ Excellent energy resolution
- ❖ Easily enabled imaging capabilities
- ❖ Works in a magnetic field

# Characterisation of 1D CZT prototype

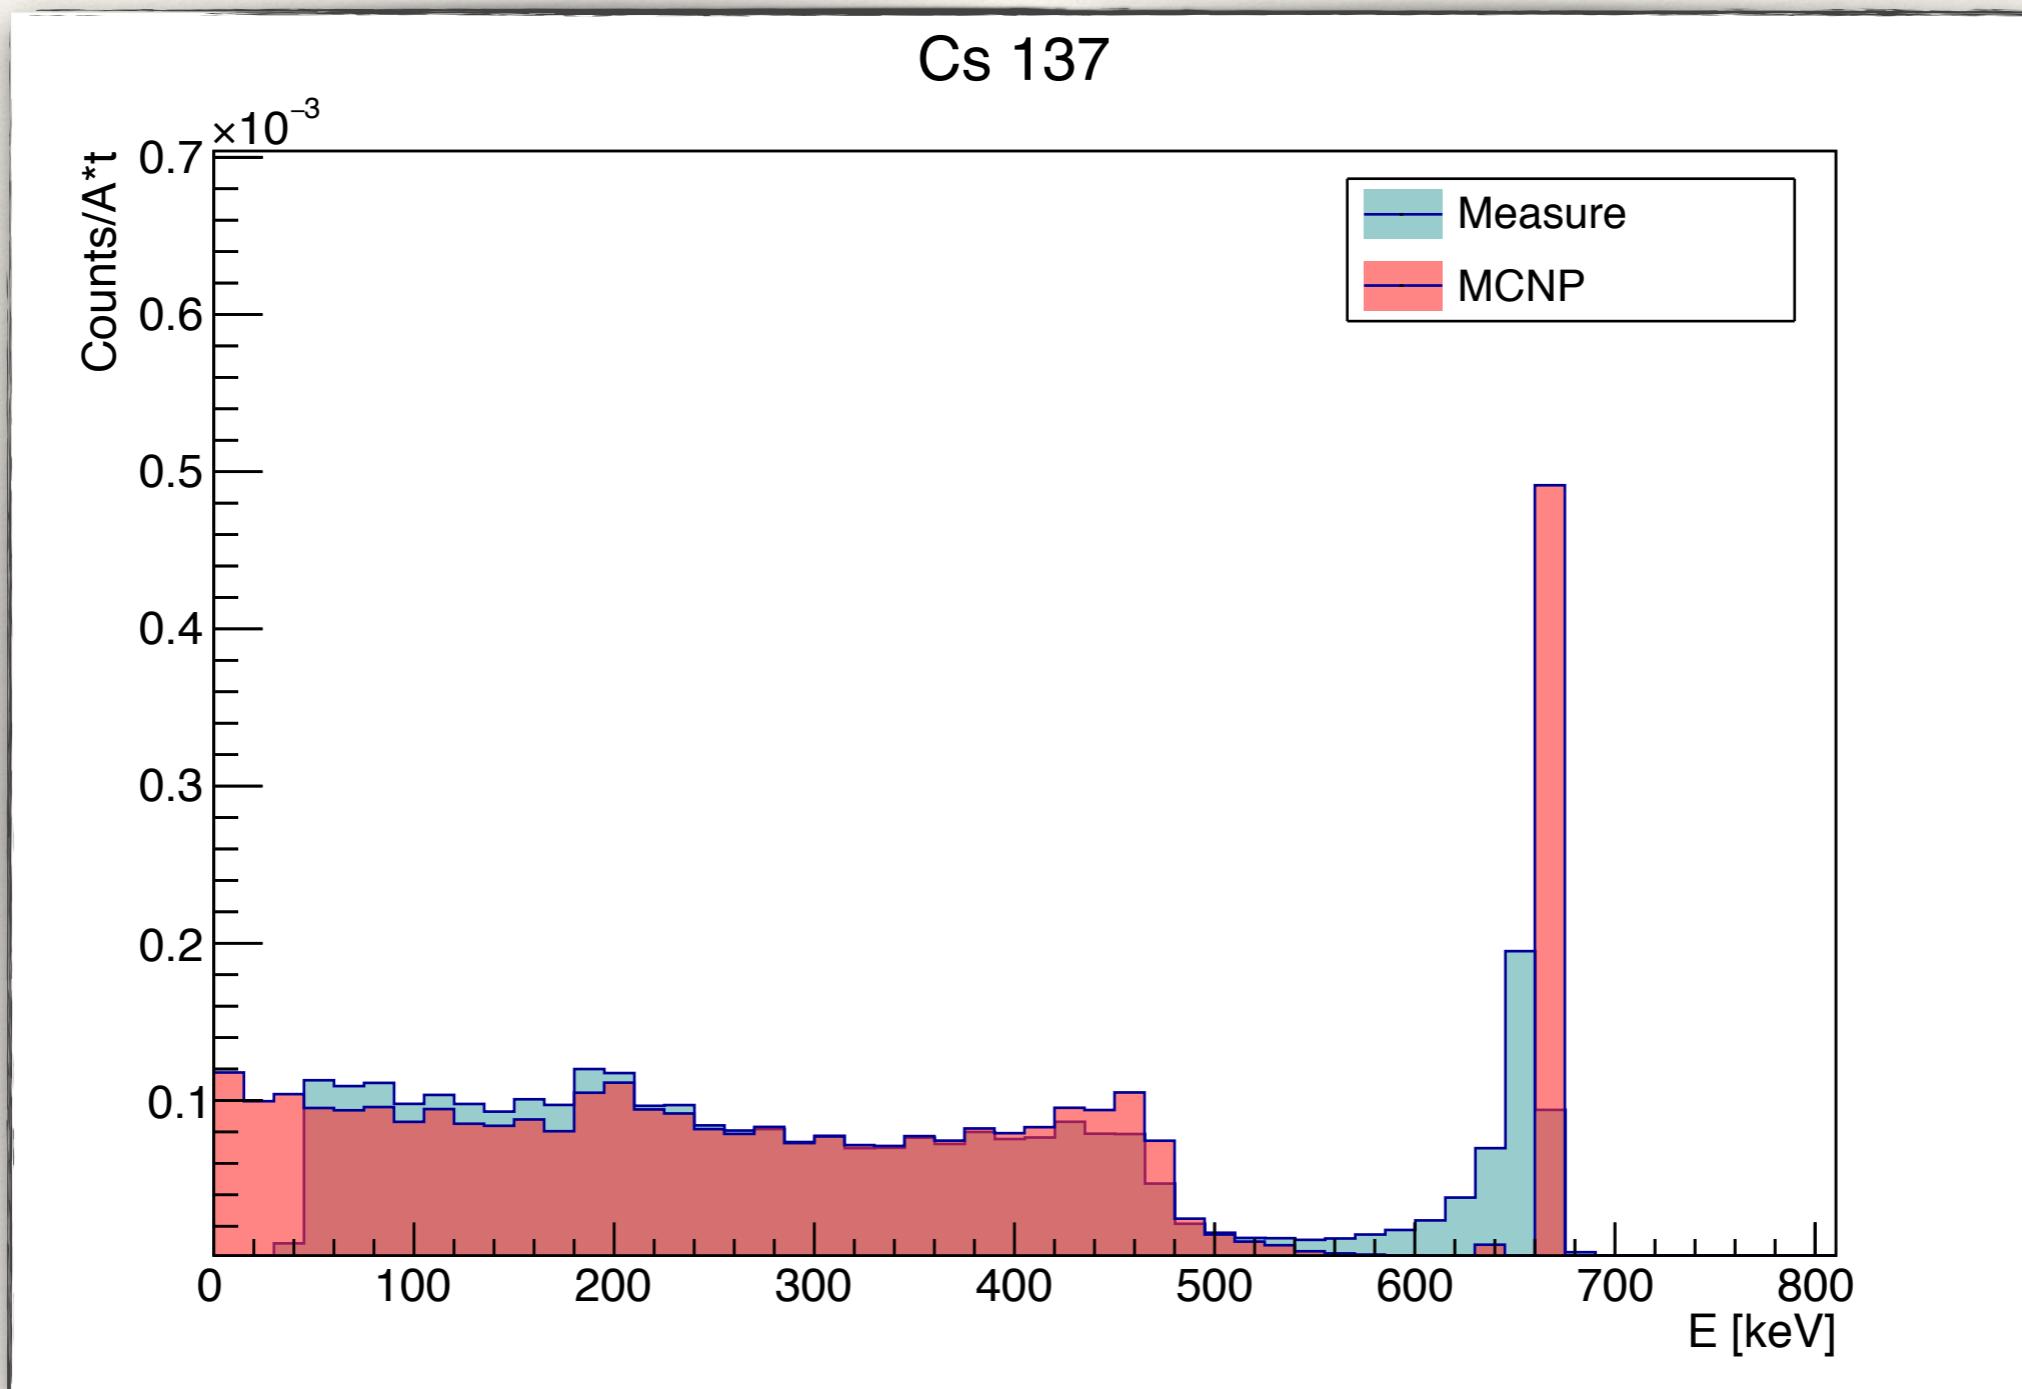

| Source    | Peak (keV) | FWHM (keV) | R     |
